

## SEAT BELT COVERS

**You'll Need: Measure your seat belt to make sure the cover will fit.**

- 4 squares of cotton ( 6.5 x 6.5)
- 4 squares of thin quilt batting (again, 6.5 x 6.5 inches)
- Package of Double Fold Extra Wide Bias Tape
  - Velcro
  - Sewing machine, scissors, thread, etc.

Okay, now cut out your 4 pieces of fabric and 4 pieces of batting. (I chose this thin stuff so that it would be more compact, easier to sew through, but still offer some padding.)

Then, place two pieces of batting together. Put two pieces of fabric on either piece of them, with the right side of the fabric facing outward.

Then pin all 4 layers in place and sew down the middle of the square and then on either side of that center seam. This will just help keep everything in place. Trim if needed.

Now, you're going to cut 2 pieces of your Bias Tape, 5.5 inches long. Place the top edge in between the fold of the bias tape and sew into place.

Then attach your velcro, however much or little you'd like, and that's it.

Then cut 2 more pieces of Bias Tape that are 6.5 inches each. Fold down each end end 1/2 inch and then attach to the sides of your cover.

Now do the same thing to the other set of fabric/batting.

And you're set to attach your covers to whatever seat belt is causing the annoyance.
